Contribution and Mistakes

If you have found a mistake in the course material or if you have any suggestion on how to improve the course, please let me know in the following form or by creating an issue on GitHub.

FAQs

Is the course difficult?

In terms of difficulty, this is of course somehow complicated for me to assess. However, I have tried to make all the content as comprehensible as possible and really do ask you many questions in the lectures. If I have the impression that something has not been understood at all, then I take longer at that point. This semester is the first time I think the course is truly finished. I have adapted the slides based on feedback from the last two years and made all the examples as simple as possible. In a nutshell: If you are interested in the subject and equations do not scare you, you will likely do great in the course.
