The Course Chatbot

What Is It?

- An **AI chatbot** that knows the materials of this course
- You find it on **every page** of the course website
- Open it with the red button at the bottom right

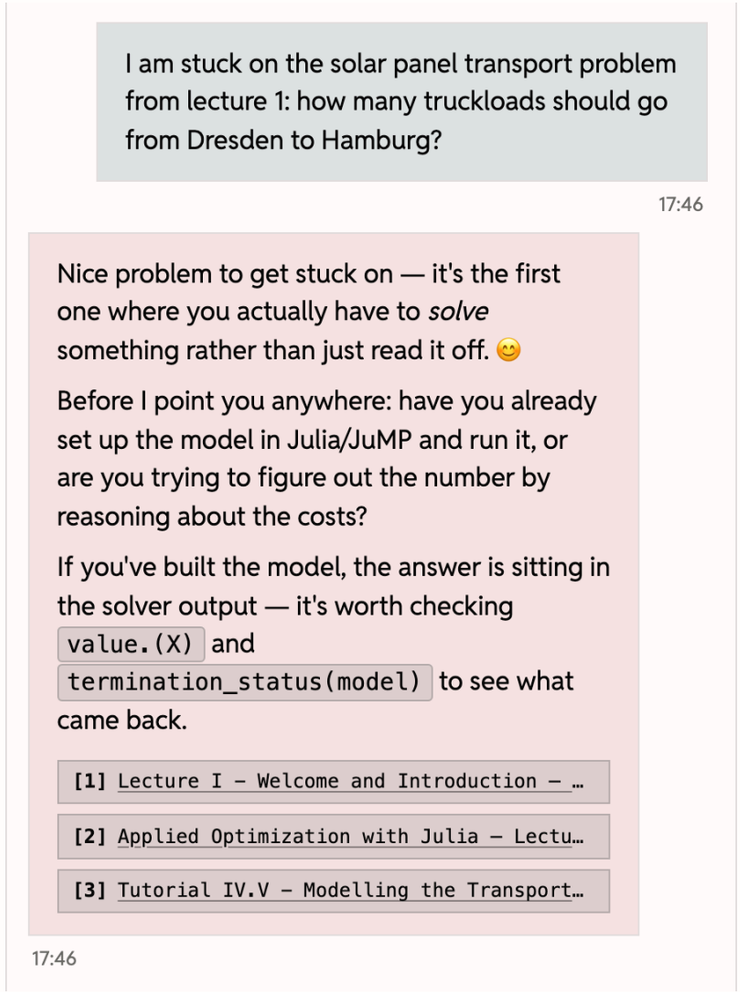

How Does It Answer?

- It gives **hints rather than complete solutions**
- So that you work out the next step yourself

- Below each answer you see the **passages from the course materials** it is based on

Let’s ask it a question!

A Question on Lecture 1

Question: How many truckloads should go from Dresden to Hamburg?

- The answer is a **hint**: a question back, not the number
- Below it are the **sources**: here lecture 1 and a tutorial

What Happens to Your Chats?

- Conversations are **stored without names**
- They are analysed to improve teaching and for scientific research
- **Please do not enter personal data!**

> ⓘ The details are on the privacy page.

Do You Have to Use It?

- No: **using the course chatbot is voluntary**
- **Studying:** You may use external AI tools (e.g., ChatGPT, Claude, Mistral, Gemini)
- **Bonus assignments:** Every submission that used AI says so, in one honest line
- **Exam:** AI tools are not permitted

> ⓘ The full AI policy is on the welcome page.

A Complement, Not a Replacement

The course chatbot **complements** the lectures and the tutorials.

It **does not replace** them!

Bring your questions to the lectures and the tutorials, just as before!

Any questions?
